SUMMARY

DevOps Engineer with 2+ years of experience in designing, automating and deploying scalable cloud-native and containerized applications on AWS and Azure. Skilled in Kubernetes (EKS, k3s), Terraform, CI/CD pipelines (GitHub Actions, Jenkins), and GitOps (ArgoCD). Hands-on with container security (Trivy), monitoring (Prometheus, Grafana), and production-grade infrastructure across client projects and 20+ portfolio projects spanning multi-cloud environments.

CORE SKILLS

Cloud Platforms

- AWS (EC2, ECS, EKS, IAM, S3, RDS, ALB, VPC, ECR, CloudFront)
- Azure (App Service, PostgreSQL, Static Web Apps, VNet, RBAC)

Infrastructure as Code

Terraform, Ansible

Containers & Orchestration

Docker, Kubernetes (EKS, k3s), Helm, Ingress Controllers (ALB, NGINX), Amazon ECR

Monitoring & Security

Prometheus, Grafana, Alertmanager, CloudWatch, Trivy (Container Scanning)

CI/CD & GitOps

GitHub Actions, GitLab CI, Jenkins, ArgoCD, SonarQube, Nexus Repository

OS, Scripting & DB

Linux, Bash, Python, PostgreSQL, MySQL, MSSQL

PROFESSIONAL EXPERIENCE

Freelance DevOps Engineer, *Client Projects & Portfolio*

Dec 2025 – Present

- Architected, deployed, and currently managing a production-grade AWS e-commerce platform for a live client using EC2, ALB, CloudFront, RDS, and VPC, with infrastructure automated through Terraform and zero-downtime deployments delivered via GitHub Actions CI/CD.
- Delivered a containerized CRM platform (.NET + MSSQL Server 2022) on VPS using Docker Compose, Nginx reverse proxy, DNS, and TLS automation — reducing manual setup effort by consolidating 5+ infrastructure components into a reproducible deployment workflow.
- Built and published 20+ end-to-end DevOps projects on GitHub spanning Kubernetes, GitOps, multi-cloud infrastructure automation, CI/CD, and observability across AWS and Azure environments.

DevOps Engineer, *MTG TECHSOFT*

Nov 2023 – Oct 2025 | Ranipet

- Designed and implemented CI/CD pipelines using GitHub Actions, Jenkins, SonarQube, and Nexus, reducing manual deployment effort by ~60% and improving release consistency across multiple environments.
- Deployed and managed containerised microservices (.NET, Java, Node.js, Angular) on Kubernetes (EKS and k3s) using Docker, Kubernetes manifests, Helm, and ArgoCD, improving deployment consistency across development and production environments.
- Implemented centralized monitoring and alerting using Prometheus, Grafana, Alertmanager, and CloudWatch, improving infrastructure visibility and enabling proactive incident detection across containerized workloads.
- Provisioned and version-controlled AWS infrastructure (VPC, ALB, RDS, ECR, EKS) using Terraform, enabling consistent, repeatable deployments across dev and production with zero manual console changes.
- Deployed and managed Azure PaaS workloads (App Service, PostgreSQL Flexible Server, Static Web Apps) using Terraform and GitHub Actions, enabling consistent infrastructure delivery across Azure environments.
- Implemented GitOps workflows using ArgoCD across EKS and k3s clusters, achieving fully automated, auditable deployments with Git as the single source of truth — reducing deployment errors from manual kubectl operations.

Cloud Administrator, *B.C.M. Higher Secondary School*

May 2021 – Nov 2023 | Dewas

- Managed AWS and Azure environments (VMs, hardware, networking, IAM/RBAC) for computer labs and academic infrastructure.
- Configured VPCs, subnets, and security groups; deployed and maintained web applications and database systems.

System Administrator, *B.C.M. Prominent School*

July 2016 – April 2021 | Dewas

- Managed Windows/Linux servers, DNS, DHCP, and Active Directory; automated sysadmin tasks via Bash scripts.

Technical Support Engineer L2, Group Leader L1, Computer Operator - system troubleshooting, OS support, and IT operations.

KEY PROJECTS (DEVOPS PORTFOLIO)

Emart DevOps Platform, *Microservices, Kubernetes (k3s), GitOps, Observability*

github.com/josephmj0303/emart-devops-platform [↗](#)

- Deployed Node.js, Java, Angular microservices on k3s using Docker and Kubernetes manifests
- CI pipelines via GitHub Actions; GitOps CD via ArgoCD with a dedicated manifests repo
- Integrated Prometheus + Grafana for observability and Trivy for container security scanning

VProfile GitOps EKS Platform, *AWS EKS, Terraform, GitHub Actions, Helm, ECR*

github.com/josephmj0303/vprofile-gitops-eks-platform [↗](#)

- Separate IAC and app-deploy repos for clean GitOps separation of concerns
- EKS cluster provisioned with Terraform; Helm-based deployments via GitHub Actions CI/CD
- Container images built and stored in Amazon ECR with automated image tagging on each push

AWS EKS .NET Microservices Platform, *AWS EKS, Terraform, .NET Core, Prometheus, Grafana*

github.com/josephmj0303/aws-eks-dotnet-microservices-platform [↗](#)

- Containerised .NET microservices on EKS; Terraform-provisioned VPC, RDS PostgreSQL, EKS cluster
- ALB/NGINX Ingress for external traffic routing; GitHub Actions CI/CD for automated build and deploy
- Prometheus + Grafana integrated for cluster and application-level monitoring

Jenkins + SonarQube + Nexus CI Pipeline, *Jenkins, SonarQube, Nexus Repository, Slack*

github.com/josephmj0303/jenkins-sonarqube-nexus-ci [↗](#)

- Production-style CI: automated build, SonarQube quality gate, Nexus artifact publish, Slack alert
- Quality gates enforce code coverage thresholds and block deployments on vulnerability failures
- Nexus Repository Manager configured for versioned artifact storage and reuse across pipelines

Monitoring & Observability Stack, *Prometheus, Grafana, Alertmanager, Python Flask*

github.com/josephmj0303/monitoring-and-observability [↗](#)

- Production-grade metrics collection, log aggregation, and Grafana dashboards for a Python Flask app
- Alertmanager rules configured for proactive multi-channel incident notification
- Custom Grafana dashboards for real-time visibility into application and infrastructure health

AWS Cloud-Native E-Commerce Platform, *AWS, EC2, ALB, CloudFront, RDS, Terraform*

github.com/josephmj0303/aws-cloud-native-ecommerce-platform [↗](#)

- Scalable HA architecture: EC2 Auto Scaling, ALB, S3 + CloudFront CDN, RDS PostgreSQL
- Full Terraform IAC for all AWS resources; GitHub Actions CI/CD for zero-touch deployments
- VPC with public/private subnets, security groups, and NAT gateway for secure network design

Azure DevOps E-Commerce Platform, *Azure PaaS, Terraform, GitHub Actions*

github.com/josephmj0303/ecommerce-azure-devops-platform [↗](#)

- Migrated production e-commerce from VPS (AlmaLinux + PostgreSQL) to Azure PaaS
- Azure App Service, PostgreSQL Flexible Server, and Static Web Apps provisioned via Terraform
- GitHub Actions pipeline for automated build, test, and release to Azure environments

WordPress on Kubernetes (Helm + NGINX), *Kubernetes, Helm, NGINX Ingress, AWS*

github.com/josephmj0303/wordpress-k8s-helm-nginx [↗](#)

- WordPress deployed on AWS Kubernetes cluster using Helm charts and NGINX Ingress Controller
- Persistent storage configured via PVC for stateful workload management
- TLS termination and custom domain routing configured via Kubernetes Ingress resources

CERTIFICATIONS & TRAINING

- | | |
|---|--|
| • AWS DevOps with Projects (Course) - Udemy | • Azure Administrator (Training Program) - Pragathi Technologies |
| • VMware vSphere ESXi & vCenter Administration (Course) - Udemy | • Computer Hardware & Networking (Certification) - Jetking |

EDUCATION

B. Sc., St. Mary's College, Sulthan Bathery

2003
